SOUTH AFRICAN NATIONAL STANDARD

Recommended methods of measurements on receivers for television broadcast transmissions

Part 5: Electrical measurements on multichannel sound television receivers using the NICAM two-channel digital sound-system

This national standard is the identical implementation of IEC 60107-5:1999 and is adopted with the permission of the International Electrotechnical Commission.

Table of changes

Change No.	Date	Scope
IEC amdt 1	1999	Amended to update the normative references, to introduce requirements for standard line output voltage, and to replace figure 1.
Nat. amdt 1	2007	Amended to change the designation from SABS to SANS, with no technical changes.

National foreword

This South African standard was approved by National Committee StanSA TC 74, *Communication technology,* in accordance with procedures of Standards South Africa, in compliance with annex 3 of the WTO/TBT agreement.

This part of SANS 60107 was published in April 2007. This SANS edition is technically identical to SABS edition 1.1 (SABS IEC 60107-5:1999). National amendment 1 has been added.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

RECOMMENDED METHODS OF MEASUREMENTS ON RECEIVERS FOR TELEVISION BROADCAST TRANSMISSIONS –

Part 5: Electrical measurements on multichannel sound television receivers using the NICAM two-channel digital sound-system

FOREWORD

1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical reports or guides and they are accepted by the National Committees in that sense.
4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards.
6) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

This part of International Standard IEC 60107 has been prepared by subcommittee 12A: Receiving equipment, of IEC technical committee 12: Radiocommunications.

This consolidated version of IEC 60107-5 is based on the first edition (1992) [documents 12A(CO)150 and 12A(CO)165] and its amendment 1 (1999) [documents 100A/113/FDIS and 100A/121/RVD].

It bears the edition number 1.1.

A vertical line in the margin shows where the base publication has been modified by amendment 1.
