Énergie solaire — Vocabulaire

Reference number
Numéro de référence
ISO 9488:1999(E/F)

Contents	Page
1 Scope.....	1
2 Solar geometry	1
3 Radiation terms and quantities	5
4 Radiation measurement	14
5 Radiation properties and processes	16
6 Indoor and outdoor climates	19
7 Collector types	20
8 Collector components and related quantities.....	23
9 Types of solar heating systems	33
10 System components and related quantities (other than collectors)	36
11 Non-solar-specific terms	38
Bibliography	41
Alphabetical index	42

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the Technical Committees are circulated to member bodies for voting. Publication as an International Standard requires approval by at least 75 % of member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 9488 was prepared by Technical Committee ISO/TC 180, *Solar energy*.
